Hallen and Willson,
CIVIL ENGINEERS,
AND
PROVINCIAL LAND SURVEYORS.
THE Subscribers beg to announce that,
having entered into partnership, and
being supplied with the most accurate in-
struments, they are now prepared to take
orders in their respective branches, and
hope by a strict regard to accuracy and
dispatch, and a close general attention to
business to give entire satisfaction to all
who may favor them with their patronage.
With a view to meeting the exigencies of
the time, where there are more neighbors
than in having their lines run at the
same time the unusually low rate of \$3.00
(three dollars) per mile run, will in general
be adhered to. Reserving, however, the
right to decide from local circumstances
whether such lines shall be run by the
piece or by the day.
Mr. HALLEN will be at Sutton the first
Tuesday in September, at Holland the
first Tuesday in October, at Brownsville the
first Tuesday in November, and at Ston-
ville the first Tuesday in December, 1861,
at each of which places he will remain a
few days.
S. W. HALLEN. ALFRED WILLSON, Jr.
Newmarket, Aug. 12th, 1861. (1-23)

Business Directory.

J. W. KRETZ,
Watch and Clock Maker.
your friend.
Begg respectfully to humbly to the citizens of

How the Eye is Swept and Washed.
For us to be able to see objects clearly
and distinctly, it was necessary that the
eye should be kept moist and clean. For
this purpose it is furnished with a little
fluid, from which flows a watery fluid
(tears) which is spread over the eye by
the lid, and is afterwards swept off by it,
and runs through a hole in the bone to
the inner surface of the nose, where the
warm air, passing over it while breathing,
evaporates it. It is remarkable that no
such glands can be found in the eyes of
fish, as the element in which they live
answers the same purpose. If the eye
had not been furnished with a liquid to
wash it, and a lid to sweep it off, things
would appear as they do when we look
through a dusty glass. Along the edges
of the eyelid there are a great number of
little tubes or glands from which flows an
oily substance, which flows over the sur-
face of the skin, and thus prevents the
edges from becoming dry or irritated,
and it also helps to keep the tears within
the lid. There are also a few little glands
attached to the eye, which enables us to
move it in every direction; and when we
consider the different motions they are
capable of giving to the eyes, we cannot
but admire the goodness of Him who
formed them, and has thus saved us the
trouble of turning our heads every time
we wish to view an object. Although the
eyes of some animals are incapable

Poetry.

The Independent Farmer.
Lest sailors ship of the windy day,
Let soldiers prize their armor,
But in my heart this battle I'll keep,
Nighting their eyes with thousands of
little globes, and by placing their eyes
in front of their hands, so that these lit-
tle insects can see all around them with-
out turning their heads. A gentleman
who has examined the eyes of a fly, says
that the two eyes of a common one are
composed of 8000 little globes, through
every one of which it is capable of form-
ing an object. Having prepared the eye
of the fly for the purpose, and placed it
before the microscope and then looked
through both, in the manner of the tele-
scope, at a steeple which was 229 feet
high, and 750 feet distant, he says he
could plainly see through every little
hemisphere, the whole steeple inverted or
turned upside down.

The Chancery Suit.
IN RE—WILLIAM MCMASTER VS. THE
CORPORATION OF THE VILLAGE OF
NEWMARKET.
S. M. JARVIS obtained a rule nisi to
quash By-Law Nos. 63 and 69 of the Cor-
poration of Newmarket, on the following
grounds:

1st. That they are by-laws for raising
money upon the credit of the Municipality
and for constructing debts not payable
within the present municipal year—not re-
quired by its ordinary expenditure, and
have not received the assent of the elec-
tors of the Municipality.

2d. They do not name a day in the
financial year when the same shall take
effect.

3d. They do not name a day when the
debts thereby created shall become pay-
able.

4th. No special rate is settled to be
levied for paying the debt to be created,
nor is its amount to be levied annually.

5th. The amount of the rateable prop-
erty in the Corporation for the year 1861
is not ascertained.

6th. The by-laws do not show the
amount of the rate in the dollar to be
levied by the Corporation for the year
1861, nor that such rate will not exceed
the rate of five cents in the dollar.

7th. They do not contain the recitals
required by the Municipal Corporation Act,
22 Vic., ch. 54, sec. 222.

8th. A by-law for a similar purpose was
rejected by the rate-payers of the village.

By-Law No. 63 was passed on 5th
August, 1861, and is entitled By-law for
purchasing site for Town Hall. It recites
that it is necessary the Corporation should
purchase a piece of land whereon to erect
a Town Hall, and that a certain piece can
be bought from Moses W. Bogart for
\$250, and enacts, first, that the Corporation
do purchase the said parcel of land for
\$250, to be used as a site for a Town Hall;
second, that the Reeve shall issue his
draft to the said Moses W. Bogart for
\$250, so soon as he shall have properly
conveyed and availed the said parcel of
land to the Corporation, payable the first
day of November, 1861.

By-Law No. 69 was passed on the same
day, and is entitled By-law for erecting a
Town Hall. It recites that the inhabi-
tants of Newmarket are desirous of erect-
ing a Town Hall, and that the Corporation
are about purchasing a site for such hall, and
that it appears there will be a large surplus
in the hands of the Corporation after pay-
ing for the site and paying the ordinary
expenses of the village for the year; and
enacts—

1. That the Committee appointed to
obtain a site for a Town Hall, and to make
the necessary arrangements for building
the same, do at once proceed to erect a
Hall on the land to be purchased as a site
therefor.

2. That the sum of \$750 be appropri-
ated, to be expended by the Committee on
the erection of the Hall.

3. That the Reeve do issue his drafts
for such sums as may be required by the
Committee as the work on the Hall pro-
gresses, so that the amount for which said
drafts are issued shall not in the aggregate
exceed \$750, not payable before first No-
vember, 1861.

4. That by-law not to take effect until
the by-law for the purchase of a site shall
be in force.

An affidavit of a resident and rate-payer
of the village of Newmarket was filed,
stating that a by-law was prepared by the
Council of the Corporation of that vil-
lage in June, 1861, for raising by loan
\$4500 upon interest, payable within four-
teen years, to be applied in the purchase
of a site and the erection of a Town Hall
and Market in the said village—a copy of
which is annexed to the affidavit—which
by-law, on 9th June, 1861, was put to the
vote of the electors, and was rejected by
a majority of eighty-five out of one hun-
dred and nine voters—only twelve voting
in favor. That three of the Council, being
a majority, passed By-laws Nos. 63 and
69, the other two members opposing them.
That neither of these by-laws were sub-
mitted to the electors, and they were
passed in defiance of a petition signed by
a very large majority of the electors.

That at the time the affidavit was sworn,
(20th August, 1861.) the assessment roll
had never finally been revised, nor had any
estimates of the ordinary expenditure of
the Corporation for the current year been
prepared or submitted to the Council, and
no rate had been settled for the payment
of the ordinary expenditure, nor had any
special or other rate been imposed for dis-
charging the debts to be created by the
purchase of the site and the erection of
the Town Hall. That for 1860 the whole
rateable property of the village was \$14,-
800, or thereabouts, and the rate levied
for that year was five cents in the dollar,
leaving a surplus of about \$19. That the
rateable property of the present year; as
appears by the assessment roll as it then
stood, was 17,007 27; a rate of five cents
in the dollar would produce the sum of
\$8503, or thereabouts, and the income of

Literature.

The Queen's Crown.
The Imperial state crown of her Majes-
ty Victoria, was made by Messrs.
Randall and Bridge in the year 1838,
with jewels taken from old crowns, and
others furnished by command of her Ma-
jesty. It consists of diamonds, pearls,
rubies, sapphires, and emeralds, set in
silver and gold; it has a crimson velvet cap,
with ermine border, and is lined with
white silk. Its gross weight is 39oz.
aprox. Troy. The lower part is 29oz.
above the ermine border, consists of a row
of 112 pearls, between which, in front of
the crown, is a large sapphire, partly drill-
ed, purchased for the crown by His Majes-
ty King George IV. At the back is a
sapphire of smaller size, and six other
sapphires three on each side, between
which are eight emeralds. Above and
below the seven sapphires are fourteen dia-
monds, and around the eight emeralds
128 diamonds. Between the emeralds
and sapphires are 16 trefoil ornaments,
containing 160 diamonds. Above the
band are eight sapphires surrounded by
eight diamonds, between which are eight
feetons consisting of 148 diamonds. In
the front of the crown, and in the centre
of a diamond Maltese cross, is the famous
ruby said to have been given to Edward
Prince of Wales, son of Edward III.,
called the Black Prince, by Don Pedro,
King of Castile, after the battle of Najera,
near Victoria, A.D. 1367. This ruby
was worn in the helmet of Henry V.,
at the battle of Agincourt, A.D. 1415. It
is pierced quite through after the Eastern
custom, the upper part of the piercing
filled up by a small ruby. Around
this, to form the cross, are 75 brilli-
ant diamonds. Between the four Mal-
tese crosses are four ornaments in the
form of the French fleur-de-lis, with four
rubies in the centres, and surrounded by
sapphire diamonds, containing respectively 85,
86, and 87 rose diamonds. From the
Maltese crosses issue four imperial arches
composed of oak leaves and acorns, the
leaves containing 728 rose, table, and brilli-
ant diamonds, containing 64 rose dia-
monds and one table diamond. The total
number of diamonds in the arches and
acorns is 108 brilliants, 116 table, and
559 rose diamonds. From the upper
part of the arches are suspended four
large pendant pearl-shaped pearls, with
small diamond caps, containing 24 very
small rose diamonds. Above the arch
stands the mound, containing in the lower
hemisphere 304 brilliants, and in the upper
part 214 brilliants; the zone being com-
posed of 33 rose diamonds. The cross on
the summit has a rose cut sapphire in the
centre, surrounded by four large brilliants,
and 108 smaller brilliants. Summary of
jewels composed in the crown:—1 large
ruby irregularly polished, 1 large broad
sapphire, 16 sapphires, 11 emeralds,
4 rubies, 1,363 brilliants, diamonds,
1,273 rose diamonds, 4 drop shaped
pearls, 273 pearls.

How the Eye is Swept and Washed.
For us to be able to see objects clearly
and distinctly, it was necessary that the
eye should be kept moist and clean. For
this purpose it is furnished with a little
fluid, from which flows a watery fluid
(tears) which is spread over the eye by
the lid, and is afterwards swept off by it,
and runs through a hole in the bone to
the inner surface of the nose, where the
warm air, passing over it while breathing,
evaporates it. It is remarkable that no
such glands can be found in the eyes of
fish, as the element in which they live
answers the same purpose. If the eye
had not been furnished with a liquid to
wash it, and a lid to sweep it off, things
would appear as they do when we look
through a dusty glass. Along the edges
of the eyelid there are a great number of
little tubes or glands from which flows an

Foreign & Colonial.

American Revolution.
(Special to the Tribune.)
WASHINGTON, Nov. 7.
The gleanings of the news to-day across
the Potomac furnish the fact that Gen.
Butterfield's foragers got thirteen wagon
loads of hay two miles beyond Fall's
Church, and the horses and mules in the
brigade were again on full allowance, and
the troops in all the camps are industri-
ously drilled by brigades and regiments;
that rumour in Alexandria has advanced
the rebel pickets, or that their nearest out-
post, which two days ago was fourteen
miles distant, is now only eight from that
city; that one of our pickets was shot by
theirs this morning; that the target prac-
tice upon our pickets has been recom-
menced near Munson's Hill, and that
Gen. Smith and Col. Jackson are report-
ed confined to their beds with fever.

CAIRO, Nov. 7.
An expedition left here last night under
command of Gen. Grant and McClernand,
which landed at Belmont, Missouri, three
miles above Columbus, at eight o'clock
this morning. The Federal troops, num-
bering 3,500, engaged the rebels, about
7,000 in number, at eleven o'clock. The
battle lasted till sundown. The rebels
were driven from their entrenchments
across the river with great loss, the camp
burned, their stores with all their bag-
gage, cannon, horses and mules and 100
prisoners taken. The Federals then re-
turned, the rebels having received reinforce-
ments from Columbus. Both Generals
had horses shot under them. Colonel
Daugherty, of Illinois, was wounded and
taken prisoner. The rebel loss is not
known. The Federal loss is believed to
be from 300 to 500.

(Herald's Dispatch.)
Was in, a Nov. 7.
The movements of the rebels on the
Lower Potomac are apparently mysterious.
Ten days ago they were busily engaged in
increasing their forces near Shipping Point
and Evansport. For the last few days
they have been remarkably quiet in that
locality. Not a gun had been fired from
their batteries. Their blockade of the
Potomac is not so complete as their bat-
teries would render it, as results are night
by running the gauntlet with impunity.
Another schooner ran down the river last
night.

ASTOUNDING Discovery in France
The following sounds very much like
the stories of the Arabian Nights, or Sin-
bad the Sailor, but as it comes from a re-
spectable source we give it for what it is
worth:
It has been a great mystery to English
bankers and to the Directors of the Bank
of England, how the bullion Bank of
France could be so greatly increased
within the last three years, while the insti-
tution has been constantly sending gold to
England, to Germany and America. Not
long since the Bank of France drew some
fifteen million francs in silver from the
Bank of England, which it paid for in gold
bars, with the French Mint stamp on them.
At its last report it showed a balance of
one hundred and seventeen millions francs
in gold, while the amount one year ago
was under eighty millions—nearly one-third
increase. It is whispered that this abnor-
mal increase is the result of a scientific
discovery, which the Emperor Napoleon
secured the monopoly of. Gold is at the
present moment manufactured in Paris in
a secret manner. The process is not used
as yet, but has been extensively and though it
is not known how extensively the precious
metal is produced, yet several hundred
weight of the material are taken to a cer-
tain place on the first of each month.
Everything is conducted with the utmost
secrecy. None of the workmen are al-
lowed to leave, and nothing definite can be
known; but the fact that gold is produced
is beyond peradventure. How long Na-
poleon III. will be able to keep his wonder-
ful secret remains to be seen.—*Banker's
Reporter.*

The Wild Men of Borneo.
The most wonderful link in the chain of
animated nature that has ever fallen to
our lot to witness, is now on exhibition in
a building in the Town Hall, Yorkville.
The gap between the Gorilla and the most
perfect specimens of the human family is
filled up completely by the race—if race
there be—to which the men referred be-
long to. So far as we have been able to
ascertain, but a very slight shade of the
lower animal pervades their organization.
They are white skinned, with long, fair
hair, and features by no means irregu-
lar. Their limbs are well formed, and their
foreheads far from retreating in that de-
gree which indicates the absence of intel-
lect. In fact, their whole anatomy is hu-
man, and their intelligence, although of no
high order, is sufficiently marked to bring
them within the pale of responsible beings.
They are about three and a half feet high,
and slenderly though muscularly built. In
